**Automatic Diatom Identification** Hans Du Buf 2002 This is the first book to deal with automatic diatom identification. It provides the necessary background information concerning diatom research, useful for both diatomists and non-diatomists. It deals with the development of electronic databases, image preprocessing, automatic contour extraction, the application of existing contour and ornamentation features and the development of new ones, as well as the application of different classifiers (neural networks, decision trees, etc.). These are tested using two image sets: (i) a very difficult set of *Sellaphora pupula* with 6 demes and 120 images; (ii) a mixed genera set with 37 taxa and approximately 800 images. The results are excellent, and recognition rates well above 90% have been achieved on both sets. The results are compared with identification rates obtained by human experts. One chapter of the book deals with automatic image capture, i.e. microscope slide scanning at different resolutions using a motorized microscope stage, autofocusing, multifocus fusion, and

particle screening to select only diatoms and to reject debris. This book is the final scientific report of the European ADIAC project (Automatic Diatom Identification and Classification), and it lists the web-sites with the created public databases and an identification demo.

### Lithium-Ion Batteries: Basics and Applications

Reiner Korthauer 2018-08-07 The handbook focuses on a complete outline of lithium-ion batteries. Just before starting with an exposition of the fundamentals of this system, the book gives a short explanation of the newest cell generation. The most important elements are described as negative / positive electrode materials, electrolytes, seals and separators. The battery disconnect unit and the battery management system are important parts of modern lithium-ion batteries. An economical, faultless and efficient battery production is a must today and is represented with one chapter in the handbook. Cross-cutting issues like electrical, chemical, functional safety are further topics. Last but not least standards and transportation themes are the final chapters of the handbook. The different topics of the handbook provide a good knowledge base not only for those working daily on electrochemical energy storage, but also to scientists, engineers and students concerned in modern battery systems.

*Application of Phytotechnologies for Cleanup of Industrial, Agricultural and Wastewater Contamination* Peter A. Kulakow 2009-11-03 As government and community leaders, private companies, citizens, and applied scientists search for low-cost methods to cleanup environmental pollution, phytotechnologies can contribute to the solution by utilizing natural processes to reduce environmental risk. Phytotechnologies use vegetation to manage environmental contaminants in soil, surface water,

and groundwater based on site-specific design considerations that can save 50 to 75 percent of the capital and operating costs compared to conventional remediation and containment technologies. Successful phytotechnology applications are based on scientific knowledge of plant physiology, chemical contaminants, climate, and soil conditions. This book presents current research findings that address soil and water contamination with obsolete pesticides, radionuclides and other inorganic and organic contaminants. This book documents international sharing of information by scientists and stakeholders seeking to use the best available information: to disseminate existing knowledge on phytotechnologies and exchange experience of field-scale applications for cleanup of industrial, agricultural, and wastewater contamination, to assess existing knowledge and identify research needs and directions for future work especially in regard to environmental management in Central and Eastern Europe and Central Asia, and to promote collaboration between different countries in preparing applications for environmental remediation and restoration.

*Methodologies and Results in Grapevine Research* Serge Delrot 2010-10-19 Grapevine is a crop of major economical interest, and wine represents a multicultural heritage which has been growing since several milleniums. Yet, modern viticulture must face several challenges. Global climate has increased berry sugar content (and alcohol in the wine) whereas phenolic and aromatic ripeness are not always achieved. Water supply is becoming shorter. New

varieties better adapted to new climatic conditions might have to be planted, which may affect wine typicity. Phytochemical treatments are more controlled, and the consumer pays increasing attention to environmentally safe practices. New methods reducing pesticide use, but maintaining yield and typicity, must be designed. The present book illustrates the recent progress made in ecophysiology, molecular and cell biology, and pathology of grapevine, as well as in precision viticulture and berry composition. Combination of these new tools with field observations will undoubtedly make it easier to face the challenges described above. These multidisciplinary contributions will be of interest to anyone involved in grapevine and wine activities.

*Twelve Years a Slave* Solomon Northup 2021-01-01 "Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

**Court Patronage and Corruption in Early Stuart England** Linda Levy Peck 2003-08-29 This wide-ranging volume goes to the heart of the revisionist debate about the crisis of government that led to the English Civil War. The author tackles questions about the patronage that structured early modern society, arguing that the increase in royal bounty in the early seventeenth century redefined the corrupt practices that characterized early modern administration.

Preface to Plato Eric A. HAVELOCK 2009-06-30 Plato's frontal attack on poetry has always been a problem for sympathetic students, who have often minimized or avoided it. Beginning with the premise that the attack must be taken seriously, Mr. Havelock shows that Plato's hostility is explained by the continued domination of the poetic tradition in contemporary Greek thought. The reason for the dominance of this tradition was technological. In a nonliterate culture, stored experience necessary to cultural stability had to be preserved as poetry in order to be memorized. Plato attacks poets, particularly Homer, as the sole source of Greek moral and technical instruction--Mr. Havelock shows how the Illiad acted as an oral encyclopedia. Under the label of mimesis, Plato condemns the poetic process of emotional identification and the necessity of presenting content as a series of specific images in a continued narrative. The second part of the book discusses the Platonic Forms as an aspect of an increasingly rational culture. Literate Greece demanded, instead of poetic discourse, a vocabulary and a sentence structure both abstract and explicit in which experience could be described normatively and analytically: in

short a language of ethics and science.

**The Order of the Golden Tree** Carol

Mary Chattaway 2006 This book explores the policy objectives underlying the gift of this Order, to sixty men, on January 1 1403. Drawing primarily on Philip's household accounts, it undertakes complementary iconographical and prosopographical analyses (of the Order insignia's form, materials, design and motto; and of distinguishing common features among its recipients), refined by reference to his policy concerns around the occasion of its bestowal, to test seven hypotheses. The evidence from the analyses enables six of these (that it was purely decorative; a courtly conceit; crusade-related; a military chivalric order; a livery badge; or a military alliance) progressively to be discarded, pointing strongly to the seventh, that the Order was a specific policy alliance, designed in fashionable form, to obscure its politically sensitive purpose. The nature of that purpose then permits a revision of Philip's role in history, particularly in relation to the creation of an independent Burgundian state, and the use of a co-ordinated propaganda campaign of slogan, badge, and supporting literature, to legitimise and popularise his plans. The analytical approach also offers insights into the significance of decorative, material gift-giving; the identification of networks; Christine de Pisan's earlier political writings, and the origins of the Order of the Golden Fleece. Carol Chattaway is Honorary Research Assistant at the Royal College of Art and University College, London University. She researches on the political significance of material objects at the Burgundian Court, in

the later middle ages.
