Kawasaki Ki-61 Hien / Ki-100 Leszek A. Wieliczko 2015-01-22 The Kawasaki Ki-61 Hien or Type 3 Fighter remains to this day one of the most recognizable Japanese fighters of the World War II era. What makes Hien unique is the powerplant - it was the only mass-produced Japanese fighter powered by an inline, liquid cooled engine. The Ki-61 began to arrive at the frontlines in large numbers in the summer of 1943 and took part in battles over New Guinea and later over the Philippines and Okinawa, as well as in the defense of the Japanese Home Islands. In total over 3,000 examples of various Ki-61 variants and derivatives were built. The Ki-100, a Ki-61-II Kai airframe mated to the Mitsubishi Ha-112-II radial engine, entered service towards the end of the war. **Asian Front** Ian Slater 2020-08-10 ON THE ASIAN FRONT At Manzhouli, near the border of China, Siberia, and Mongolia, the Chinese launch their charge into the woods. There is a roar of fire—AK-47s, AK-74s, 7.62mm bayonet-equipped type 56 Chinese carbines, type 43 and 50 7.62mm ChiCom submachine guns—and, from the other side, the eruption of the SAS/D’s Heckler & Koch 9mm parabellums firing at over eight hundred rounds a minute, the crash of grenades, and the terrible whistling of fléchettes. Over the Hindu Kush, four ChiCom fighters, Shenyang J-6Cs, with swept-back wings and armed with air-to-air missiles and deadly NR-30mm cannons, swoop down from 36,000 feet at Mach 1.3 toward Allied B-52s. Suddenly the sky is aglow with phosphorous flares like shooting stars, as the ChiComs’ four 120-pound Soviet-type Aphid missiles streak toward the B-52s at 2,800 meters per second...IT’S ALL-OUT WAR

John Deere Snowmobiles Ronald K. Leonard 2014-01-23 Long respected as a manufacturer of sturdy agricultural machinery, the John Deere Company began in the 1960s to build a line of consumer products in a dedicated factory in Horicon, Wisconsin. Starting with a lawn and garden tractor in 1963, Deere soon entered the fast-growing snowmobile market, introducing two models in 1971. The next 13 years would see a succession of models as Deere vied against tough competitors in a weather-dependent market. This detailed history, written by two key participants in the snowmobile program, describes the development of John Deere snowmobiles from start to finish: the design and engineering decisions that shaped each important model; reception of the snowmobiles by consumers; the factory race teams; the introduction of front-engine and water-cooled models; the process of selecting engines and negotiating with suppliers, including when problems developed; and the snowmobiles’ impact on product engineering. The text provides an inside view of Deere’s Consumer Products Division at a time of rapid growth, and of the people and processes that made it all happen.

Motorized Obsessions Paul R. Josephson 2007-08-22 From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.
