The Other Rāma Brian Collins 2020-10-01 A systematic analysis of the myth cycle of Paraśurāma ("Rāma with the Axe"), an avatára of Viṣṇu with a much darker reputation. The Other Rāma presents a systematic analysis of the myth cycle of Paraśurāma ("Rāma with the Axe"), an avatára of Viṣṇu best known for decapitating his own mother and annihilating twenty-one generations of the Kṣatriya warrior caste in an extermination campaign frequently referred to as "genocide" by modern scholars. Compared to Rāma and Kṛṣṇa, the other human forms of Viṣṇu, Paraśurāma has a much darker reputation, with few temples devoted to him and scant worshippers. He has also attracted far less scholarly attention. But dozens of important castes and clans across the subcontinent claim Paraśurāma as the originator of their bloodline, and his mother, Reṇukā, is worshipped in the form of a severed head throughout South India. Using the tools of comparative mythology and psychoanalysis, Brian Collins identifies three major motifs in the mythology of Paraśurāma: his hybrid status as a Brahmin warrior, his act of matricide, and his bloody one-man war to cleanse the earth of Kṣatriyas. Collins considers a wide variety of representations of the myth, from its origins in the Mahābhārata to contemporary debates online. He also examines Paraśurāma alongside the Wandering Jew of European legend and Psycho's matricidal serial killer Norman Bates. He examines why mythmakers once elevated this transgressive and antisocial figure to the level of an avatāra and why he still holds such fascination for a world that continues to grapple with mass killings and violence against women. Brian Collins is Drs. Ram and Sushila Gawande Chair in Indian Religion and Philosophy at Ohio University. He is the author of The Head beneath the Altar: Hindu Mythology and the Critique of Sacrifice.

Inspiring the Secondary Curriculum with Technology James Shea 2014-10-24 Are other teachers using technology in their lessons? Are you letting your own students down by not harnessing the power of your students' technology knowledge in your lessons? Is your school asking you to show where you are developing ICT in your subject teaching? Technology in your subject does not mean teaching databases, spreadsheets or word processing. Having technical knowledge is no longer sufficient or indeed necessary in today's world – more important is the knowledge of how to advise and teach students to use technology efficiently and responsibly through their subject. Students faced with a 'problem' will need to hunt the internet for open source software, download apps and respond to the problem using technology as a problem solving tool. The scenarios are endless, but can be generated by the teacher - this could mean students publishing work through Amazon's Kindle or keeping a blog within a class wiki. Teachers do not need to have technical knowledge; rather they need knowledge of trends and opportunities. They then need to blend their basic subject pedagogy within these new trends to contextualise ICT skills. This book looks at pedagogical approaches to using technology in the classroom that will help you to harness future trends, technology and software and embed them into your subject teaching. Full of practical advice, it illustrates how secondary teachers – of any discipline – can accelerate their students' learning, progress and ability within their subject whilst developing the ICT skills needed in the workplace and society. Including case studies and examples throughout, chapters cover: Blended Learning (mixing traditional teaching methods with e-learning) Developing interactive students Mobile technologies Student safety online E-Portfolios and Virtual Learning Environments This timely new book will help you structure your teaching to harness the latest developments in technology in tandem with the students you teach.

Girls to the Rescue Emily Hamilton-Honey 2020-05-25 During World War I, as young men journeyed overseas to battle, American women maintained the home front by knitting, fundraising, and conserving supplies. These became daily chores for young girls, but many longed to be part of a larger, more glorious war effort--and some were. A new genre of young adult books entered the market, written specifically with the young girls of the war period in mind and demonstrating the wartime activities of women and girls all over the world. Through fiction, girls could catch spies, cross battlefields, man machine guns, and blow up bridges. These adventurous heroines were contemporary feminist role models, creating avenues of leadership for women and inspiring individualism and self-discovery. The work presented here analyzes the powerful messages in such literature, how it created awareness and grappled with the engagement of real girls in the United States and Allied war effort, and how it reflects their contemporaries' awareness of girls' importance.

Forest Fire Danger Prediction Using Deterministic-Probabilistic Approach Baranovskiy, Nikolay Viktorovich 2021-05-21 Forest fires cause ecological, economic, and social damage to various states of the international community. The causes of forest fires are rather varied, but the main factor is human activity in settlements, industrial facilities, objects of transport infrastructure, and intensively developed territories (in other words, anthropogenic load). In turn, storm activity is also a basic reason for forest fires in remote territories. Therefore, scientists across the world have developed methods, approaches, and systems to predict forest fire danger, including the impact of human and

storm activity on forested territories. An important and comprehensive point of research is on the complex deterministic-probabilistic approach, which combines mathematical models of forest fuel ignition by various sources of high temperature and probabilistic criteria of forest fire occurrence. Forest Fire Danger Prediction Using Deterministic-Probabilistic Approach provides a comprehensive approach of forest fire danger prediction using mathematical models of forest fuel with consideration to anthropogenic load, storm activity, and meteorological parameters. Specifically, it uses the deterministic-probabilistic approach to predict forest fire danger and improve forest protection from fires. The chapters will cover various tree types, mathematical models, and solutions for reducing the destructive consequences of forest fires on ecosystems. This book is ideal for professionals and researchers working in the field of forestry, forest fire danger researchers, executives, computer engineers, practitioners, government officials, policymakers, academicians, and students looking for a new system to predict forest fire danger.

Handbook to Bach's Sacred Cantata Texts Melvin P. Unger 1996-04-16 The German church cantata of the eighteenth century was the culmination of a long tradition of Lutheran "sermon music" that used the proclamation, amplification, and interpretation of scripture to teach and persuade the listener. Bach's cantatas also served this didactic purpose and typically incorporate numerous allusions to scriptural passages or themes in their librettos. Unfortunately, many of these passages remain obscure to the twentieth-century musician because they demand a much closer familiarity with the Bible than is common today. The Handbook to Bach's Sacred Cantata Texts identifies scriptural references for the wording, imagery, and themes that Bach's listeners would have known. In addition, the religious or literary theme of each text is summarized within the specific context of the cantata as a whole. With interlinear translations and a full complement of indexes.

Handbook of Research on Big Data Clustering and Machine Learning Garcia Marquez, Fausto Pedro 2019-10-04 As organizations continue to develop, there is an increasing need for technological methods that can keep up with the rising amount of data and information that is being generated. Machine learning is a tool that has become powerful due to its ability to analyze large amounts of data quickly. Machine learning is one of many technological advancements that is being implemented into a multitude of specialized fields. An extensive study on the execution of these advancements within professional industries is necessary. The Handbook of Research on Big Data Clustering and Machine Learning is an essential reference source that synthesizes the analytic principles of clustering and machine learning to big data and provides an interface between the main disciplines of engineering/technology and the organizational, administrative, and planning abilities of management. Featuring research on topics such as project management, contextual data modeling, and business information systems, this book is ideally designed for engineers, economists, finance officers, marketers, decision makers, business professionals, industry practitioners, academicians, students, and researchers seeking coverage on the implementation of big data and machine learning within specific professional fields.
