**Radar Instruction Manual** United States. Maritime Administration 2005 Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration?s three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. **Digital Histories** Mats Fridlund 2020-12-07 Historical scholarship is currently undergoing a digital turn. All historians have experienced this change in one way or another, by writing on word processors, applying quantitative methods on digitalized source materials, or using internet resources and digital tools. Digital Histories showcases this emerging wave of digital history research. It presents work by historians who - on their own or through collaborations with e.g. information technology specialists - have uncovered new, empirical historical knowledge through digital and computational methods. The topics of the volume range from the medieval period to the present day, including various parts of Europe. The chapters apply an exemplary array of methods, such as digital metadata analysis, machine learning, network analysis, topic modelling, named entity recognition, collocation analysis, critical search, and text and data mining. The volume argues that digital history is entering a mature phase, digital history ‘in action’, where its focus is shifting from the building of resources towards the making of new historical knowledge. This also involves novel challenges that digital methods pose to historical research, including awareness of the pitfalls and limitations of the digital tools and the necessity of new forms of digital source criticisms. Through its combination of empirical, conceptual and contextual studies, Digital Histories is a timely and pioneering contribution taking stock of how digital research currently advances historical scholarship.

Annas 2000 An enriching introduction to the diverse and exciting world of literature, this anthology offers a broad collection of short fiction, poetry, drama and nonfiction selections written by a diverse group of writers who represent different social classes, races, genders, cultures, and sexual orientations. Organizes selections around five socially relevant themes—Growing Up and Growing Older; Women and Men; Money and Work; Peace and War; and Varieties of Protest. **Neoliberal Bodies and the Gendered Fat Body** Hannele Harjunen 2016-08-25 In recent decades the rise of the so-called "global obesity epidemic" has led to fatness and fat bodies being debated incessantly in popular, professional, and academic arenas. Fatness and fat bodies are shamed and demonised, and the public monitoring, surveillance and outright policing by the media, health professionals, and the general public are pervasive and socially accepted. In *Neoliberal Bodies and the Gendered Fat Body*, Hannele Harjunen claims that neoliberal economic policy and rationale are enmeshed with conceptions of body, gender, and health in a profound way in contemporary western culture. She explores the relationships between fatness, health, and neoliberal discourse and the role of economic policy in the construction of the (gendered) fat body, and examines how neoliberal discourses join patriarchal and biomedical constructions of the fat female body. In neoliberal culture the fat body is not just the unhealthy body one finds in medical discourse, but also the body that is costly, unproductive and inefficient, failing in the crucial task of self-management. With an emphasis on how neoliberal governmentality, in its many forms, affects the fat body and contributes to its vilification, this book is essential reading for scholars of feminist thought, sociology, cultural studies and social theory with interests in the body, gender and the effects of neoliberal discourse on social attitudes.

**Self-Injurious Behaviors** Daphne Simeon 2008-11-01 Throughout history, people have invented many different ways to inflict direct and deliberate physical injury on themselves -- without an intent to die. Even today, the concept and practice of self-injury is sanctioned by some cultures, although condemned by most. This insightful work fills a gap in the literature on pathologic self-injury. The phenomenon of people physically hurting themselves is heterogeneous in nature, disturbing in its impact on the self and others, frightening in its blatant maladaptiveness, and often indicative of serious developmental disturbances, breaks with reality, or deficits in the regulation of affects, aggressive impulses, or self states. Further complicating our understanding is the large and diverse scope of psychiatric conditions, such as pervasive developmental disorders, Tourette's syndrome, and psychosis, in which these behaviors occur. This volume presents a comprehensive nosology of self-injurious behaviors, classifying them as stereotypic, major, compulsive, and impulsive (with greater emphasis on the last two categories because they are the most commonly seen). The chapter on stereotypic self-injurious behaviors (highly repetitive, monotonous behaviors usually devoid of meaning, such as head-banging) focuses on the neurochemical systems underlying the various forms of stereotypic movement disorders with self-injurious behaviors, typically seen in patients with mental retardation and autism, and discusses their psychopharmacological management. The chapter on psychotic, or major, self-injurious behaviors (severe, life-threatening behaviors, such as castration) presents a multidimensional approach to evaluating and treating patients with psychosis and self-injurious behaviors, including the neuroanatomy and neurobiology of sensory information processing as background for its discussion of neurobiological studies and psychopharmacological treatments. Chapters on the neurobiology of and psychopharmacology and psychotherapies for compulsive self-injurious behaviors (repetitive, ritualistic behaviors, such as trichotillomania [hair-pulling]) offer much-needed biological research and the first empirical treatment studies on compulsive self-injurious behaviors, and argue that a distinction can indeed be made between compulsive and impulsive self-injurious behaviors. Chapters on the neurobiology, psychopharmacology, and dialectic behavior and psychodynamic theory and treatment of impulsive self-injurious behaviors (habitual, chronic behaviors, such as skin picking) supplement the few neurobiological studies measuring impulsivity, aggression, dissociation, and suicide and detail the efficacy of various medications and psychotherapies. An eminently practical guide with exhaustive references to the latest data and research findings, this concise volume contains clinical material and therapeutic interventions that can be used right away by clinicians to better understand and treat patients with these complex and disturbing behaviors.

**Assessment and Learning in Content and Language Integrated Learning (CLIL) Classrooms** Mark deBoer 2020-11-17 This volume builds a conceptual basis for assessment promoting learning in Content and Language Integrated Learning (CLIL) classrooms and proposes practical assessment approaches and activities that CLIL teachers can apply in the classroom. CLIL as an educational context is unique, as language and content learning happen simultaneously. The efficacy of such instruction has been studied extensively, but assessment in CLIL classrooms has drawn much less attention. The present volume aims to fill this gap. Arranged based on different ways that content and language are integrated in CLIL, the chapters in this book together build a solid theoretical basis for assessment promoting learning in CLIL classrooms. The authors discuss how assessment eliciting this integration yields insights into learners' abilities, but more importantly, how these insights are used to promote learning. The contributors to the volume together build the understanding of classroom-based assessment as cyclic, of teaching, learning, and assessment as inter-related, and of content and language in CLIL classrooms as a dialectical unity. This volume will spark interest in and discussion of classroom-based assessment in CLIL among CLIL educators and researchers, enable reflection of classroom assessment practices, and foster collaboration between CLIL teachers and researchers. The assessment approaches and activities discussed in the volume, in turn, will help educators understand the scope of applications of assessment and inspire them to adapt these to their own classrooms.
