**Evolution Education Around the Globe** Hasan Deniz 2018-06-21 This

edited book provides a global view on evolution education. It describes the state of evolution education in different countries that are representative of geographical regions around the globe such as Eastern Europe, Western Europe, North Africa, South Africa, North America, South America, Middle East, Far East, South East Asia, Australia, and New Zealand. Studies in evolution education literature can be divided into three main categories: (a) understanding the interrelationships among cognitive, affective, epistemological, and religious factors that are related to peoples' views about evolution, (b) designing, implementing, evaluating evolution education curriculum that reflects contemporary evolution understanding, and (c) reducing antievolutionary attitudes. This volume systematically summarizes the evolution education literature across these three categories for each country or geographical region. The individual chapters thus include common elements that facilitate a cross-cultural meta-analysis. Written for a primarily academic audience, this book provides a much-needed common background for future evolution education research across the globe.

What Should Schools Teach? Alka Sehgal Cuthbert 2021-01-07 The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions. What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach?* The blurring of distinctions between pedagogy and curriculum, and between experience and knowledge, has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge (what to teach) and their own pedagogy (how to teach), and how both need to be informed by values of intellectual freedom and autonomy. This second edition includes new chapters on Chemistry, Drama, Music and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum, and on the relationship between the

knowledge that children encounter at school and in their homes. Children's Care, Learning and Development NVQ Marian Beaver 2009 The most up-to-date text available, this new edition covers the EYFS and is fully mapped to the current specs. Information is presented in an accessible way, helping students gain the necessary knowledge. The vibrant, colourful text design contains an assortment of text features, along with many new photos, bringing the world of Childcare to life.

**Effective Learning in Classrooms** Chris Watkins 2007-03-12 `The book is at once accessible, evidence-based, practical and eminently readable...Readers will find in this book a treasury of learners' voices guiding us towards the goal of more effective learning in classrooms' - International Network for School Improvement `This book promotes an ambitious and inspiring conception of meaningful pedagogy and works to applaud those teachers who are determined to reflect upon, enquire into, and then facilitate "effective learning". A coherent and structured case is made for the primacy of "learning" over "work" - Learning & Teaching Update This book addresses an important, and too seldom addressed issue: learning. Not teaching, not performance, not "work": this book really is about learning, what makes learning effective and how it may be promoted in classrooms. The authors take the context of the classroom seriously, not only because of its effects on teachers and pupils, but because classrooms are notorious as contexts which change little. Rather than providing yet more tips, they offer real thinking and evidence based on what we know about how classrooms change. Four major dimensions of promoting effective learning in classrooms are examined in depth: Active Learning; Collaborative Learning; Learner-driven Learning and Learning about Learning. Evidence from practising teachers in the form of case studies and examples, and evidence from international research in the form of useful ideas and frameworks is included.

*Near-Death Experiences* Ornella Corazza 2008-06-30 Near death experiences fascinate everyone, from theologians to sociologists and neuroscientists. This groundbreaking book introduces the phenomenon of NDEs, their personal impact and the dominant scientific explanations. Taking a strikingly original cross-cultural approach and incorporating new medical research, it combines new theories of mind and body with contemporary research into how the brain functions. Ornella Corazza analyses dualist models of mind and body, discussing the main features of NDEs as reported by many people who have experienced them. She studies the use of ketamine to reveal how characteristics of NDEs can be chemically induced without being close to death. This evidence challenges the conventional 'survivalist hypothesis', according to which the near death experience is a proof of the existence of an afterlife. This remarkable book concludes that we need to move towards a more integrated view of embodiment, in order to understand what human life is and also what it can be. Ornella Corazza is a NDE researcher at the School

of Oriental and African Studies (SOAS), University of London. In 2004-5 she was a Member of the 21st Century Centre of Excellence (COE) 'Program on the Construction of Death and Life Studies' at the University of Tokyo.
