[Handbook of Automotive Power Electronics and Motor Drives](#) Ali Emadi 2017-12-19 Initially, the only electric loads encountered in an automobile were for lighting and the starter motor. Today, demands on performance, safety, emissions, comfort, convenience, entertainment, and communications have seen the working-in of seemingly innumerable advanced electronic devices. Consequently, vehicle electric systems require larger capacities and more complex configurations to deal with these demands. Covering applications in conventional, hybrid-electric, and electric vehicles, the Handbook of Automotive Power Electronics and Motor Drives provides a comprehensive reference for automotive electrical systems. This authoritative handbook features contributions from an outstanding international panel of experts from industry and academia, highlighting existing and emerging technologies. Divided into five parts, the Handbook of Automotive Power Electronics and Motor Drives offers an overview of automotive power systems, discusses semiconductor devices, sensors, and other components, explains different power electronic converters, examines electric machines and associated drives, and details various advanced electrical loads as well as battery technology for automobile applications. As we seek to answer the call for safer, more efficient, and lower-emission vehicles from regulators and consumer insistence on better performance, comfort, and entertainment, the technologies outlined in this book are vital for engineering advanced vehicles that will satisfy these criteria.

**Electromagnetic Emissions Assessment of a Plug-in Hybrid Electric Vehicle in Dynamic Driving Conditions**

2022 In order to safeguard potential benefits brought by the electrification of road transport it becomes more and more important to evaluate the performance of hybrid, fully battery-powered and fuel-cell powered electric vehicles (HEVs, BEVs and FCEVs) in terms of electromagnetic emissions in charging and real-driving conditions. The present report describes the results of a test campaign conducted on a station wagon, namely a Peugeot 508 SW PHEV (hybrid plug-in vehicle) within the EC Joint Research Centre's VELA 9 laboratory, providing a semi-anechoic chamber for testing electromagnetic compatibility of all types of EVs. The vehicle was tested not only according to the UNECE Regulation n.10, but then also under more realistic driving conditions beyond the requirements of that regulation, in order to check its performance in terms of radiated emissions with regard to electromagnetic compatibility. Other tests were conducted beyond UNECE Reg. 10, in order to assess possible improvements on the current measurement procedures. The influence of different speeds, driving cycles, driving mode settings, and measurement setups on the vehicle's electromagnetic emissions was evaluated as well as a broader set of frequency ranges explored.

*Lead-Acid Batteries for Future Automobiles* Jürgen Garche 2017-02-21 Lead-Acid Batteries for Future Automobiles provides an overview on the innovations that were recently introduced in automotive lead-acid batteries and other aspects of current research. Innovative concepts are presented, some of which aim to make lead-acid technology a candidate for higher levels of powertrain hybridization, namely 48-volt mild or high-volt full hybrids. Lead-acid batteries continue to dominate the market as storage devices for automotive starting and power supply systems, but are facing competition from alternative storage technologies and being challenged by new application requirements, particularly related to new electric vehicle functions and powertrain electrification. Presents an overview of development trends for future automobiles and the demands that they place on the battery Describes how to adapt LABs for use in micro and mild hybrid EVs via collector construction and materials, via carbon additives, via new cell construction (bipolar), and via LAB hybrids with Li-ion and supercap systems System integration of LABs into vehicle power-supply and hybridization concepts Short description of competitive battery technologies
